

Vaultline Executive Brief

Security built in. Threats locked out.

Pillar 06 of six · Secure · The cybersecurity pillar of the Keystone Vault platform.

The challenge

The more of your workforce lives in one place, the more that place has to be defended. Personnel records, assessments, training evidence, and labor data are exactly what attackers want and what regulators require you to protect. Security bolted on after the fact leaves seams; security built in doesn't.

What Vaultline does

- **Zero-trust access.** Every request verified, every identity confirmed — least-privilege access across every pillar.
- **Data protection.** Your records and infrastructure protected by enterprise-grade, always-on controls.
- **Wraps everything.** The security envelope around all six pillars and everyone in the record.

Independent or stacked

Vaultline runs on its own, front to back. But it is built to **stack** — because every Keystone Vault pillar writes to one shared record, Vaultline gets stronger the moment you add the pillars around it.

Stronger together. Vaultline can protect your infrastructure on its own. But its real power is as the envelope around the whole vault — securing RecruitVault through TimeVault and everyone in the record. The more you stack, the more it protects.

Where it fits the lifecycle

Secure wraps the entire lifecycle: whatever pillars you run, Vaultline protects the shared record and everyone in it — from the first application to full clearance. Security isn't a stage; it's the perimeter.

Who it's for

Any organization that has to protect its people data and prove it — government contractors, CMMC-bound suppliers, and regulated employers who can't afford a breach or a finding.

Keystone Vault is built by GT Creative Solutions — led by Leroy A. Latshaw, a retired U.S. Army aviator who, with his wife Jamie, spent 23+ years growing a government-services firm into a \$200M international company. Every pillar reflects a standard they had to meet.
